

Mission Statement of TH Aschaffenburg University of Applied Sciences

UAS Aschaffenburg is the Bavarian university of applied sciences in the Rhine-Main metropolitan region. Since it was founded in 1995, it has been characterised by excellent study conditions, a focus on practice, high quality and excellent performance in research, teaching, transfer and continuing education.

Our values

We are committed to diversity, mutual respect, equal opportunities, equality and participation. Being responsible for one another and appreciating all people and the natural foundations of life are our common basis. We promote internationality in all areas and are cosmopolitan, innovative and dynamic. As a scientific institution, we help contribute to shaping opinions based on facts. At our university, making family and career compatible and the well-being of all university staff are a high priority. Further training and development opportunities strengthen our ability to deliver the best level of performance possible.

Our mission in teaching, research, transfer and continuing education

We put students at the centre of everything we do. Applied relevance is reflected in excellent teaching and intensive practical contacts. Students grow from the challenges of their studies into personalities who act responsibly and think critically.

We are characterised by a personal and lively culture of learning and discussion on campus as a place of encounter. We are at the cutting edge of technology and make use of what digitalisation has to offer in a future-oriented way. Our innovative, interdisciplinary and international degree programmes open up educational opportunities.

We consider the different needs of society and business. This allows us to provide our graduates with exceptional career opportunities.

Success in applied research and knowledge transfer is a particular strength of Aschaffenburg University of Applied Sciences. In this way, we make an important contribution to overcoming current social and global challenges and to the well-being of future generations. In the main areas of research, we cooperate with the world of academia and with companies in Germany and abroad and promote our own young scientists.

As an impulse generator for the Bavarian Lower Main region and beyond, we function as cooperation partners and support start-up projects in the university's environment. We create offers for academic training with a focus on lifelong learning and transfer current knowledge to the world of work.

To achieve our goals, we network regionally, nationally and internationally and actively shape change for a common sustainable future.
